# Part 1:

# Selection of Trends and Construction of the Mannheim Trend File

## 1. Catalogue of Trends of the ZEUS Eurobarometer Question Bank<sup>1</sup>

The project "Conservation of the ZEUS Database and Eurobarometer Trend File" was a co-operation of the Mannheimer Zentrum für Europäische Sozialforschung (MZES) and the Zentrum für Umfragen, Methoden und Analysen (ZUMA). It aimed at storing the data, at archiving the documentations and reports of the former Zentrum für Europäische Umfrageanalysen und Studien (ZEUS) and, finally, at creating a SPSS file from the ZEUS-databases with the most important trends of the Eurobarometer surveys. The first step was to retrieve a catalogue of Eurobarometer trends in the ZEUS question bank (see Appendix 1).

## 2. Selection of Trends

The trend variables for the Mannheim Eurobarometer Trend File were chosen in an iterative selection procedure. Some 150 trend variables were taken from the ZEUS Eurobarometer databases. (In addition to the data stored at ZEUS, more recent time points were added from invidual Eurobarometer surveys). The selection was based on the list of trend questions (see Appendix 1) of the ZEUS question bank which contained all Eurobarometer surveys from 1970 to 1995. In this list, questions that were asked at least three times in identical wording are defined as "trends". Standard Eurobarometer as well as special studies and flashes are legitimate sources.

In contrast to the earlier ZEUS definition, we restricted our search for trend variables on standard Eurobarometer surveys (i.e., the regular face-to-face surveys of the European Commission). Further, we raised the minimum frequency for inclusion as a trend to five standard Eurobarometer surveys – questions that were asked less than five times were not accepted. Finally, questions on special subjects and technical variables were eliminated. By doing so, we reduced the total number of trend questions from 431 (ZEUS question bank) to 142 trends by raising the minimum required frequency to five; and further to 109 trends by restricting ourselves to standard trends. 13 questions on special subjects<sup>2</sup> were omitted, as were 15 country-specific questions<sup>3</sup> and five technical trends. Of the resulting 109 trends, 66 covered attitudes and behaviours while 43 were demographic or technical variables. By omitting redundancies and simple transformations of original variables, demographics were further reduced to 28 trends. Concerning the questions on attitudes etc. two trends have been excluded: One index with unclear content and construction and another, which can easily be constructed by recoding a maintained trend variable. Finally, seven variables were added to the dataset for technical reasons<sup>4</sup>. As a result, the Mannheim Eurobarometer Trend File contains a total of 100 trend questions out of the Eurobarometers ECS70 – EB51.1 for the time period from 1970 – 1999. The question wordings of all these trends were checked systematically and are documented in Part 2 of this report.

<sup>&</sup>lt;sup>1</sup> Data file construction and codebook of the *Mannheim Eurobarometer Trend File 1970-1999* is based upon the works of the staff of the former ZEUS institute at Mannheim University, and in particular to its data base administrator Peter Schubert. The production of this trend file was supported by the capable research assistance of Bernd Krüger and Stefan Solleder, among others.

<sup>&</sup>lt;sup>2</sup> Special subject questions are concerning subjects like cancer, smoking, nuclear energy, energy or environment.

<sup>&</sup>lt;sup>3</sup> Country specific questions are those asked only in a single country.

<sup>&</sup>lt;sup>4</sup> These trends are: TECH VAR EUROBAROMETER NUMBER, TECH VAR IDENTIFICATION NUMBER, TECH VAR NATION IDENTIFIER, TECH VAR SPLIT VARIABLE, TECH VAR WEIGHT EUROPEAN UNION, TECH VAR WEIGHT NATION and TECH VAR WEIGHT SAMPLE.

## 3. Addition of Trends and Updates

The second trend file edition (2.00) was produced under a cooperative arrangement between the *Zentralarchiv für Empirische Sozialforschung at the University of Cologne* (ZA) and MZES. 16 Eurobarometer covering the time period 1999-2002 (surveys 52.0 – 57.2) were added. The 100 trends of the first edition (1970-1999) were continued if available in this time period, including the documentation of variations in question wording. Further more two new trends were included (TRUST, CITIZEN), which now met the minimum frequency condition. The tech variable EDITION (for the identification of the data set edition and version) has been introduced, and the tech variable NATION was devided into NATION1 (identical with former tech variable NATION) and NATION2 (collapsing the separate samples for Germany und the United Kingdom). Considering the split up of EPIMP into EPIMP1 and EPIMP2 the trend file now contains a total of 105 trend questions.

Errata in data or documentation, which in the meantime were detected for the first edition of the Eurobarometer trend file (1970-1999) or in corresponding single Eurobarometer were corrected as far as possible, or otherwise documented.

Changes over time in the coding scheme for the trendvariable OCCUPATION have been harmonised applying a new systematic three-digit-coding, to distinguish as far as possible major categories and sub-categories and in order to avoid identical coding for different categories in the time series.<sup>5</sup>

## 4. Identifying Corresponding Variables in the ZEUS Eurobarometer Database / Eurobarometers

After the selection of the trend questions, the corresponding variables were identified. The number of variables of the selected 105 trend questions increases to 146, as single items of multiple response questions or battery questions are coded with the same trend name.

## 5. Harmonisation of Trend Variables

Identical question wordings do not automatically translate into identical codings. Only harmonised trend variables are coded identically (same variable names and labels, same missing values codes). As some trends are based on instruments which differ slightly from one survey to another, the following aspects were taken into account while integrating trend variables into the Mannheim Eurobarometer Trend File:

#### • Variable name

Harmonised trend variables have identical variable names. If variables were not harmonised yet in the ZEUS data bases, a common name had to be chosen before integrating them into the Mannheim Eurobarometer Trend File.

<sup>&</sup>lt;sup>5</sup> For details of the new coding, please see the "Selected Trends in Details"

### Harmonisation of codings

Even when trend questions are asked with identical answering categories, not harmonised trends do not necessarily have identical codings. Therefore, harmonisation of trends meant ensuring that categories with identical wording do have identical codings over time.

## • Harmonisation of missing value codes

Missing value codes like DK (don't know) or NA (no answer) were not handled in a uniform manner in the different Eurobarometer studies. In several Eurobarometers, those categories are coded separately, in other studies not. To complicate things, in a number of Eurobarometers, some countries chose the first procedure and others the second. For reasons of harmonisation both categories were recoded to a uniform DK/NA-category.<sup>6</sup> Missing values which result from filter questions (or when a question was not asked in a particular country) were coded separately as INAP (inapplicable), as far as possible.<sup>7</sup> Cases for trend variables which do not appear in the respective Eurobarometer wave, are set to system missing (sysmis). Missing values are coded in a uniform manner in all variables. INAP is coded 9 in the case of variables with a width of one, 99 in the case of a width of two, and 999 if variables are coded with a width of three. DK, NA (or NA) is coded 8, 98, respectively 998.

#### • Variables and value label

In addition to variable names the labels of the trend variables were harmonised.

### Checking plausibility

While consistency checks (e.g. by crossing age and eduction) have not been done here, plausibility checks have been done. For each single trend variable country specific frequency distributions have been inspected over time. In the case of remarkable fluctuations, printed documents have been consulted to correct data where necessary and possible. This occured only in rare occasions.

## 6. The Eurobarometer Data Base

Since the early seventies Standard Eurobarometer are conducted on behalf of the European Commission at least two times a year in all member states of the European Union.<sup>8</sup> The ZEUS data base was built from single Eurobarometer editions as produced and distributed by the Inter-university Consortium for Political and Social Research (ICPSR), Ann Arbor, Michigan, and from data files obtained directly from the fieldwork agency. Eurobarometers since 1996 have been obtained from the ZA. They were also inspected for the selected trend questions, and harmonisation tasks comparable to the ones described above have been carried out for each of these now in total 28 additional Eurobarometer files<sup>9</sup>. And again, variables (e.g. vote intention) that are characterised by country specific answering

<sup>&</sup>lt;sup>6</sup> In nearly all variables: the exceptions are VOTEINT, INCLVOTE, LASTVOTE, FEELCLO, EUVONEXT, REGIONAT, SCMI, TEA, MATPMAT, and MEDIAUSE.

<sup>&</sup>lt;sup>7</sup> Some Eurobarometer studies distinguish between DK/NA and INAP while others do not. If INAPs are coded with the DK/NAs, a subsequent correction was not done.

<sup>&</sup>lt;sup>8</sup> For more information please see the website of the European Commission's DG Press and Communication - Public Opinion Analysis Sector (http://europa.eu.int/comm/public\_opinion/index\_en.htm) and the information on the Eurobarometer series made available in the internet by ZA (http://www.gesis.org/eurobarometer).

<sup>&</sup>lt;sup>9</sup> 1st Trend File edition: EB45.1, EB46.0, EB46.1, EB47, EB47.1, EB47.2, EB48, EB49, EB50.0, EB50.1, EB51.0, EB51.1; 2nd Trend File edition: EB52.0 to EB57.2

categories and are thus stored as a set of variables (one variable per country) have been adjusted to the standards of the ZEUS Eurobarometer database. Based on these sets of country specific variables, one single variable is constructed for each set. The resulting variable then contains codings that differ in their meaning from one country to another. We hereby reduce the number of variables and the size of the data file in total. These special variables are documented and described in Part 2 of this data file report.<sup>10</sup>

## 7. Construction of the File of all Trend-Variables of all Standard-Eurobarometers

After harmonisation, the individual Eurobarometer datasets were matched into one comprehensive file. The Mannheim Eurobarometer Trend File in its updated 2<sup>nd</sup> edition consists of 146 variables which are extracted from 86 standard Eurobarometer surveys with in total 1134384 interviews. The uncompressed SPSS system file occupies about 275 MB of storage space in the uncompressed version. The variable order in the data set corresponds to the variable order in the codebook ducumentation; the alphabetical order (as used in the trend overview table) can be selected as alternative variable order option in SPSS.

<sup>&</sup>lt;sup>10</sup> The necessary information to handle variables with country specific codings can be found in the Appendix to this documentation.

## 1. Overview of Selected Trends

In the following synopsis all trend questions are listed as they were included in the individual Eurobarometers. The codings in the header of the table identify the individual Eurobarometers (see Table 2). The last column of the table reports on how often the respective trend was asked in the Eurobarometer studies as covered by the Mannheim Eurobarometer Trend File.<sup>11</sup>

## 2. The Structure of the Documentation

The structure of the documentation of the Mannheim Eurobarometer Trend File is the following:

#### • Trend names

The documentation refers to the trend names of the ZEUS question bank as the selection of the variables of the Mannheim Eurobarometer Trend File was based on it. These trend names consist of one or more words and are not necessarily identical with the corresponding variable names.

#### • Variable names

As a trend does not necessarily result in a single variable, trend names and variable names are not always identical. If a trend requires several variables, variables are named in such a way that the common trend is identified by a prefix. In the case of harmonised trends the trend names of the qbank are applied as variable names.

#### • Question texts

As we are dealing with trend variables, question wordings are constant over time (except minor acceptable variations). Differences mostly occur with respect to the placement and the sequence of questions in the questionnaire. Therefore the wording of the question is documented without question numbers. The question wordings are taken from the English basic questionnaires of the Eurobarometer surveys. Variations of the wording in various Eurobarometer studies are reported in footnotes.

#### • Frequency distributions

The documentation of the dataset is completed by tables of **unweighted** frequency distributions of trend variables, broken down by Eurobarometer surveys. The user is advised that these **unweighted** frequency distributions are given for documentary purposes, and that they must not be mistaken as nationally representative findings. What follows is not a data source book, it is a codebook.

#### 3. Technical Variables and Selected Trends in Detail

According to their subject, the trend file variables are grouped into eight categories: technical and weighting variables, demographic trend variables and trend variables concerning EC/EU attitudes and behaviours and their indices, sociopolitical attitudes and behaviours and their indices, especially those on voting. Technical variables are used to identify the Eurobarometer, the nation, or the individual respondent. Weighting variables help to adjust samples to different universes. Demographic variables describe the social position of the respondents, for example their age, sex, or education. EC/EU variables are variables referring to questions on the European Community or the European Union. EC/EU index variables are indices constructed out of EC/EU variables. Socio-political variables are variables concerning attitudes to political and social issues. Socio-political index variables are indices constructed out of sociopolitical variables. Finally, voting variables cover variables like national or European vote intention or vote recall.

#### 3.1. Technical Variables

ARCHIVE STUDY ID

The variable STUDY\_ID is used to identify the Mannheim Eurobarometer Trend File in the ZA archive holdings resp.

VARIABLE NAME: STUDY ID

ARCHIVE EDITION ID

VARIABLE NAME: EDITION

The variable EDITION is used by the archive (ZA) to identify the explicitly coded editon and version (decimal places) number of the Mannheim Eurobarometer Trend File. A new edition is defined by the inclusion of new trend variables and or Eurobarometer waves. Versioning is used to identify corrected data sets within one edition. The actual number is coded.

TECH VAR IDENTIFICATION NUMBER

data catalogue. The actual number is coded.

VARIABLE NAME: ID

The variable ID is used to identify individual respondents in each of the Eurobarometer studies unequivocally. It has as many categories as respondents (with a frequency of one). As the original IDs of the Eurobarometer datasets do not always fulfill this requirement, a new ID was created in each Eurobarometer by assigning a sequential number to each individual respondent. This ID variable is not identical with the respondent identification variables in the single Eurobarometer data sets.

The variable ID exists for all Eurobarometer studies.

## TECH VAR SPLIT VARIABLE

## VARIABLE NAME: SPLIT

The variable SPLIT identifies which group of a split half experiment for a particular question the individual respondent was subjected to. The meaning of the split varies of course from question to question (see Appendix 2 for details).

## TECH VAR EUROBAROMETER YEAR

VARIABLE NAME: YEAR

The variable YEAR is used to identify the particular year in which the respective Eurobarometer (resp. interview) was conducted.

The variable YEAR is available for all Eurobarometer studies.

#### TECH VAR EUROBAROMETER NUMBER

VARIABLE NAME: EB

The variable EB is used to identify the particular Eurobarometer in which an interview was taken. A three-digit numbering was used where the first two digits identify the Eurobarometer number (like EB11) and the last digit identifies a particular wave of a Eurobarometer operation. In later Eurobarometers in particular more than one survey was taken within the framework of one Eurobarometer operation.

The variable EB is available for all Eurobarometer studies.

The Eurobarometer-surveys integrated in the Mannheim Trend File are coded the following:

#### TECH VAR NATION1 IDENTIFIER

#### VARIABLE NAME: NATION1

The variable NATION1 identifies in which country a particular interview was conducted. Usually the selection of countries is restricted to member states of the European Community/European Union. The number of member states increased during its history and varies from six (Belgium, Germany, France, Italy, the Netherlands, and Luxembourg which however was not included in the early ECS studies) in 1970 up to 15 (Belgium, Denmark, Germany, Finland, France, Greece, Ireland, Italy, Luxembourg, the Netherlands, Austria, Portugal, Sweden, Spain, and the United Kingdom) in 1999. Concerning the United Kingdom and Germany, additional distinctions between Great Britain and Northern Ireland and between West and East Germany (Federal Republic of Germany since reunification) are used. The variable NATION1 is also needed to identify the meaning of variables with country specific categories, e.g.

income or the vote variables.

The variable NATION1 is included in all surveys. It is coded in the following way:

- 1. FRANCE
- 2. BELGIUM
- 3. THE NETHERLANDS
- 4. GERMANY WEST
- 5. ITALY
- 6. LUXEMBOURG
- 7. DENMARK
- 8. IRELAND
- 9. GREAT BRITAIN
- 10. NORTHERN IRELAND
- 11. GREECE
- 12. SPAIN
- 13. PORTUGAL
- 14. GERMANY EAST

<sup>&</sup>lt;sup>14</sup> In all European Union (formerly European Communities) Member Countries samples were initially drawn among the national population only, otherwise the interview was closed. Starting with Eurobarometer 41.1 the target population is the population of any nationality of an European Union member country, resident in any of the Member States. For test purposes Eurobarometer 41.0 includes a non-national European Union citizens oversample, except for Norway and Finland. In total 373 extra-interviews were conducted in accordance to the proportion of non-nationals in each country. In order produce results for nationals only for a valid comparison with previous Eurobarometer surveys, the weighting variable WSAMPLE has to be applied. The non-nationals oversample can be identifierd as coded zero in WSAMPLE.

<sup>&</sup>lt;sup>15</sup> This concerns non-EU countries at times (Norway, Finland, Sweden, Austria) which are included in the respective Eurobarometer.

3.2. Weighting Variables

Weighting variables adjust distributions of social-structural characteristics in a sample to those in a universe. Those

adjustments have been made in a country-specific idiosyncratic way during the years when Eurobarometers and the

preceding ECS studies were carried out by Gallup (Europe). When INRA took over in 1989 (starting with EB321), a

consistent representative weighting routine has been applied allover. Six socio-demographic criteria were used (age,

sex, size of household, regional affiliation, size of community). In order to harmonise weighting factors throughout the

Eurobarometer series, ZEUS initiated a recalculation of weights for the earlier Eurobarometers (which was technically

realised by INRA, Brussels). Therefore the three weighting variables WSAMPLE, WNATION, and WEURO that are

included here are established upon common and uniform criteria for all Eurobarometer studies. The original weighting

factors of the pre-1989 surveys are not included in the Mannheim Eurobarometer Trend File.

TECH VAR WEIGHT SAMPLE

VARIABLE NAME: WSAMPLE

WSAMPLE is the most basic of all three weighting factors. It adjusts distributions in the samples to those in the

respective universe. WSAMPLE should be used together with id variable NATION1.

In the case of Eurobarometer 41.0 the oversample of non-national European Union citizens (in total 373 cases from all

countries) is excluded from analysis when weighting by wasmple. This oversample was included in Eurobarometer

41.0 for test purposes; starting with Eurobarometer 41.1 the EB target population is the population of any nationality of

an European Union member country.

Note: The application of WSAMPLE for the Irish sample in ECS73 produces unexpected regional distributions for

Ireland. In the case of Eurobarometer 5 the application of WSAMPLE excludes 17 Italian cases from analysis.

TECH VAR WEIGHT NATION

VARIABLE NAME: WNATION

As more than one sample is drawn for some nations, WNATION is used to adjust distributions to those in the

respective nations. Note that WSAMPLE and WNATION only differ for the United Kingdom and, in later surveys, for

Germany. WNATION should be used together with id variable NATION2.

TECH VAR WEIGHT EUROPEAN UNION

VARIABLE NAME: WEURO

WEURO adjusts the size of national (resp., subnational) samples to the size of national populations relative to one

another. This weight is used when the European Community/European Unions is analysed as an entity rather than its

constituent nations or regions.

## VARIABLE NAME: CP\*

<The trend "COMMON POLICY AREAS" is a battery of questions asking for policy areas which should either be decided on the level of nation states or on a European level. All policies which were at least five times subject of questions in an Europarometer (with the same wording and independent from the number of policies being subject of questions in one survey) are included in the dataset. Appendix 9 shows tables concerning this trend.>

# 3.5. Variables concerning party preferences and electoral behaviour

All variables measuring attitudes and behaviours vis-a-vis political parties (i.e., VOTEINT, INCLVOTE, LASTVOTE, FEELCLO, EUVONEXT) are coded according to the ZEUS Code of Party Families. This ZEUS Code of Party Families is country specific. The categories have different meanings for different countries. The ZEUS Code of Party Families has three digits: The first represents the party family, the second and third identify an individual party in this family. The assignment of parties to families is done according to their overall ideological orientations.

For details of the ZEUS Code of Party-Families see Appendix 10. Table 3 presents the coding of party-families for all countries.

Table 3: The ZEUS Party-Family Code

## **EB16:**

<FOLLOW-UP QUESTION AFTER THE RESPONDENTS HAVE BEEN ASKED TO CHOOSE A PARTY TO WHICH WHICH THEY FEEL CLOSE TO> DO YOU CONSIDER YOURSELF TO BE VERY CLOSE TO THIS PARTY, FAIRLY CLOSE OR MERELY A SYMPATHIZER?

<sup>119</sup>Please notice that there is a difference between the question wording in different countries. Whereas the English versions - and derived field questionnaires - ask an absolute question (are you close to a party?), the French versions - and derived field questionnaires - ask a relative question (are you closer to one party than to the others?). - 4. FOUR
- 5. FIVE
- 6. SIX
- 7. SEVEN
- 8. EIGHT

98. DK. NA

 $<sup>^{163}</sup>$  - CHILDOLD and CHILDYNG with variations concerning the number of answering categories:

<sup>--</sup> EB3, EB4 (only CHILDOLD), EB6, EB8, EB9, EB10: categories: ..., 4. FOUR, 5. FIVE OR MORE, 0. NONE; DK, NA; (in the datset coded DK, NA 98).

<sup>--</sup> EB11: ..., 4. FOUR, 5. FIVE OR MORE, 0. NONE, NA. (in the datset coded DK, NA 98).

<sup>--</sup> EB4 (only CHILDYNG), EB5, EB7, EB10A: 0. NONE, DK, NA; (in the datset coded DK, NA 98). 1. ONE,..., 9. NINE OR MORE...

<sup>--</sup> EB12: 0. NONE (in the dataset coded 10), 1. ONE, ..., 5. FIVE OR MORE,.

<sup>--</sup> EB13: Varying by country NONE is coded 0 or 1, as a result the following codes are shifted accordingly.

<sup>--</sup> EB14, EB15; EB16: 0. NONE (in the dataset coded 10), ..., 6. SIX (AND MORE).

<sup>--</sup> EB17 (only CHILDYNG), EB18: 0. NONE, NA (in the datset coded DK, NA 98).; 1. ONE, ... , 7. SEVEN.

<sup>--</sup> EB17 (only CHILDOLD) and since EB19: number of children is asekd by 10 answering categories like in the basic question text above. Differences occur concerning the names of the single categories. In EB17, EB19, EB20, EB21 the (common) category NONE, NA is originally coded 0 (instead of 10) but recoded in the datenset to 98=NONE; NA. Since EB22, there has been a category 0. NONE but no category DK, NA. In the datenset the category NONE was coded 10.

<sup>-</sup> Additional variations in the dataset:

<sup>--</sup> EB3, EB4 (only CHILDOLD), EB6, EB8, EB9, EB10: 98= NONE, DK, NA, (INAP)

<sup>--</sup> EB5, EB10A: 5=FIVE AND MORE (combined categories 5–9)

<sup>--</sup> EB7 (CHILDOLD): categories 1–5, see above, 7=SEVEN OR MORE, 98=NONE, DK, NA, (INAP).

<sup>--</sup> EB7 (CHILDYNG): categories 1-5, 7, see above; 8=EIGHT OR MORE, 98=NONE, DK, NA, (INAP).

<sup>--</sup> EB11: (0=)98=NONE, NA.

<sup>--</sup> EB12, EB13, EB16: 10=NONE, 98=NA.

<sup>--</sup> EB14 (CHILDOLD): 0. NONE, ... , 7. SEVEN, 10=NONE, 98=NA.

<sup>--</sup> EB14 (CHILDYNG): ..., 5. FIVE (AND MORE), 10=NONE, 98=NA.

<sup>--</sup> EB15: 0. NONE, ..., 5. FIVE, 10=NONE, 98=NA.

<sup>--</sup> EB16: Code 98 includes NONE (576 cases for the Netherlands)

<sup>--</sup> EB17 (only CHILDYNG), EB18: (0=)98=NONE, NA.

<sup>-</sup> Single categories show a frequency of 0.

<sup>&</sup>lt;sup>164</sup> DK/NA and NONE are coded together in code 0 (NONE) the orginal dataset, except for EB12 and EB17

#### 3.7. Socio-Political Index-Variables

#### TREND: MAT POSTMAT INDEX

VARIABLE NAME: MATPMAT

Following Ronald Inglehart's typology of materialistic resp. postmaterialistic orientations, MATPMAT measures respondents' issue orientations based on the variables VALPRI1 and VALPRI2. Figure 3 explains the construction of this index. Respondents whose first and second priority are identical are not assigned (INAP).

The coding of MATPMAT is as follows:

- 1. MATERIALISTIC
- 2. MIXED ORIENTATION
- 3. POSTMATERIALISTIC
- 7. DK<sup>201</sup>
- 8. NA<sup>202</sup>
- 9. INAP<sup>203</sup>

#### TREND: MEDIA USE INDEX

VARIABLE NAME: MEDIAUSE

The index MEDIAUSE measures respondents' media exposure. The index is based on the variables NEWSTV, NEWSPAP and NEWSRAD which measure the frenquency of usage of different news media. If TV and radio as well as newspapers are used several times a week, the overall media use is classified to be very high. If two media are used at least several times a week, the overall media use is classified as high. If only one medium is used at least several times a week, the overall media use is classified as low. If all three media are used less than several times a week, the overall media use is classified as very low. Cases with no information on all three variables are coded NA, those with information only on one or two variables are coded DK.

MEDIAUSE is coded as follows:

- 1. VERY HIGH (++)
- 2. HIGH (+)
- 3. LOW (-)
- 4. VERY LOW (--)
- 7. DK
- 8. NA<sup>204</sup>
- 9. INAP<sup>205</sup>

 $<sup>^{204}</sup>$  DK/NA in all corresponding variables (NEWSPAP, NEWSRAD, NEWSTV)

# 3.8. EC/EU Index-Variables

#### TREND: COMMON MARKET INDEX

VARIABLE NAME: SCMI

This index combines REGRET and MEMBRSHP and serves to measure the attitudes of respondents towards economic aspects of European unification. Respondents with a positive attitude to his/her country's membership in the EC resp. EU and who would regret if the EC or EU would be scrapped, are classified as strong supporters of economic integration. Respondents showing positive attitudes towards EC or EU on only one variable, are moderate supporters. Persons with undecided or indifferent position on both variables, are classified as neutral. Respondents who show a negative position towards the EC or EU in either REGRET or MEMBERSHP, are classified as moderate opponents of economic integration. Finally, respondents with negative attitudes on both variables are strong opponents. Figure 1 demonstrates the construction of the index.

The index SCMI is coded in the following way:

- 1. STRONG OPPOSITION
- 2. MODERATE OPPOSITION
- 3. NEUTRAL POSITION
- 4. MODERATE SUPPORT
- 5. STRONG SUPPORT
- 7. DK
- 8. NA

# TREND: TYPOLOGY EURO ATTITUDES

# VARIABLE NAME: TEA

The index TYPOLOGY OF EUROPEAN ATTITUDES serves to measure the general attitude towards European unification. The joint distributions of MEMBRSHP and UNIFICTN is analysed. A respondent who thinks positive about her/his country's membership in the EC resp. EU and who supports further efforts for a European unification is classified as positive. A respondent who thinks negative about her/his country's membership in the EC resp. EU and who is against a European unification is classified as negative. The attitudes of all other respondents are defined as ambivalent. Details of this coding are presented in Figure 2.

The index TEA is coded as follows:

- 1. POSITIVE ATTITUDES
- 2. AMBIVALENT ATTITUDES
- 3. NEGATIVE ATTITUDES
- 7. DK
- 8. NA
- 9. INAP<sup>209</sup>
